EARTH CLAMP METERS

UT27X Series

The UT27X Series Earth Clamp Meter is a device for measuring ground resistance, featuring easy operation, portability, high accuracy and strong anti-interference capability; it is widely used in telecommunications, power, equipment rooms and other fields.

Strong anti-interference & High accuracy

Permalloy is used as the core material of the clamp head, which has strong anti-interference ability.

Permalloy has extremely high magnetic permeability, which enables the clamp meter to achieve high-precision and high-sensitivity measurement under the condition of extremely weak alternating magnetic field.

Characteristics	Permalloy	Silicon Steel Sheet	Soft Ferrite
Initial Permeability (μ_i)	Extremely high (up to 105,000 or higher)	Relatively low (usually 1,500 - 6,000)	Medium to high (usually 1,400 - 15,000)
Maximum Permeability (μ_m)	Extremely high (up to 100,000 or more)	Significantly lower than permalloy	Significantly lower than permalloy
Saturation Magnetic Induction (Bs)	Medium (about 0.8T)	High (1.8T - 2.0T)	Low (0.3T - 0.5T)
Coercivity (Hc)	Extremely low	Relatively high	Low
Resistivity	Relatively low (about 55 $\mu\Omega\cdot\text{cm}$)	Very low (about 50 $\mu\Omega\cdot\text{cm}$)	Very high (about $10^4 \mu\Omega\cdot\text{cm}$)
Relative Cost	High	Low	Low

Large clamp size

Max measurable conductor diameter: 44mm, suitable for most of application scenarios.

UNI-T Smart Measure

- Generating testing report;
- Generating real-time charts;
- Export multiple test data: PDF/XLS/JPEG/CSV;

Self-calibration

1Ω resistance loop

10Ω resistance loop

Before testing, the standard-equipped test loops can be used for testing to check whether the device works accurately. The test loops are 1Ω test loop and 10Ω test loop respectively.
